

Avinash Verma

aviver26@gmail.com | (217) 819-7935 | Boston, MA | [Portfolio](#) | [Linkdin](#)

Design technologist driven by curiosity and continuous learning, working at the intersection of design, data, and technology. Builds computational systems and interfaces that help teams explore ideas, experiment, and achieve their design goals with the help of technology.

WORK EXPERIENCE

CBT Architects

(3 years) June 2023 - Present

Design Technologist

Boston, MA

- Engineered a real-time web dashboard integrating distributed Revit usage telemetry into searchable, visual insights, enabling faster root-cause investigation and saving ~5 hours per model debugging session (*React, JavaScript, HTML/CSS, WebSockets*).
- Researched, tested, and prototyped scan-to-BIM workflows, Gaussian splat representations, and AI-driven image/video rendering pipelines, reducing visualization turnaround from days to hours for faster design exploration (*Postshot, Luma.AI, XFigura, ComfyUI*).
- Designed and shipped Revit-native C# add-ins combining daily-use productivity tools (family cleanup, material analysis, and model health utilities) with telemetry capture of user activity and model metadata, persisting data to MongoDB and surfacing insights via an embedded WebView UI (*C#, Revit API, WebView2, MongoDB*).
- Built an interactive web application to visualize a multifamily leasing timeline in 3D, enabling users to explore units and availability over time through hover/click interactions and timeline scrubbing (*React, React Three Fiber, Three.js*).
- Developed parametric workflows like façade generation, panel rationalization, and option-driven massing studies, supporting pavilion design exploration for a project in Abu Dhabi (*Rhino, Grasshopper, Rhino.Inside.Revit, Revit*).

CBT Architects

(3 months) June 2022 - August 2022

Design Technology Co-Op

Boston, MA

- Supported design teams through computational and parametric modeling tasks, assisting with early-stage design exploration and iteration
- Implemented one-click Window-to-Wall ratio calculations using Dynamo scripting that saved teams 10+ hours per design cycle and improved the speed of envelope feasibility studies.

N+U Design Studio

(1 year) July 2020 - August 2021

Architecture Designer

New Delhi, India

- Led architectural design sprints across concept and development phases through modeling, documentation, and design iteration
- Supported site coordination through drawing revisions, submittal/shop drawing reviews, and issue tracking to keep documentation aligned with field conditions and project timelines.
- Trained interns on firm workflows and modelling/documentation best practices

N+U Design Studio

(6 months) January 2018 - July 2018

Architecture Intern

New Delhi, India

TECHNICAL SKILLS

Programming: React, JavaScript, ThreeJS, TypeScript, C#, Python, HTML, CSS

Platforms & Tools: Web technologies, Revit API, Rhino/Grasshopper, MongoDB, ACC APIs, Git

Capabilities: Computational design, Parametric workflows, UI/UX design, Data-driven systems, Full-Stack applications, Rendering & 3D Modeling

EDUCATION

University of Illinois at Urbana-Champaign

August 2021 - May 2023

Master of Architecture (M.Arch)

Champaign, IL

School Of Planning and Architecture

August 2014 - May 2019

Bachelor of Architecture (B.Arch)

Bhopal, India

- Student Council President 2018-19
